HYDRO TREADMILL 'STANDALONE'

PRODUCT INFORMATION

HYDRO TREADMILL 'STANDALONE'

PRODUCT DESCRIPTION

The hydro treadmill is designed for using on an existing pool floor and is a great tool for rehabilitation, improving mobility, fitness and wellbeing. The efficiency of hydrotherapy is widely recognised by medical professionals, and at Variopool too, we are familiar with this popular form of aquatherapy. The use of movable pool floors and bulkheads is a must to guarantee the best results, as they allow the various target groups to make optimal use of the therapy pool facilities, and they ensure the water temperature can be efficiently regulated.

The movable floor can be equipped with movable stairs, a lift for people with disabilities or a ramp to allow rehabilitation patients to access the pool unaided. Underwater treadmills can also be installed, so that patients do not need to turn back once they reach the wall, boosting the efficiency of their workout.

TECHNICAL SPECIFICATIONS AND FEATURES

Material - Frame	Stainless Steel 316
Material - Walking area	Softwalk belt
Walking area	L 1215 (48") mm x W 575 mm (22.5")
Treadmill dimensions including display	L 1750 (70")mm x W 935 (37") x H 1790mm (70")
Weight	200kg (441lbs)
Max distance from main control panel to treadmill	10m
Max distance from main control panel to operator panel	15m
Speed range (17V AC Drive)	0.2 - 11kph (0.12 - 7mph)
Power (17V AC Drive)	220/240V Single phase 50/60hz 16A

SPECIFICATIONS

Hydro treadmill, Model Standalone
