

**VARIO**  **POOL**  
THE REAL DEPTH INVESTMENT

**PRODUCT INFORMATION**  
**HINGED SEPARATION BULKHEAD**

### PRODUCT DESCRIPTION

The Variopool hinged separation bulkhead is designed to maximise the flexibility of a standard swimming pool by dividing it into two separate individual areas. When not in use the hinged bulkhead rests completely level with the pool floor allowing for complete use of the pool for activities such as lane swimming, water polo and galas. Once raised the wall acts as a safe partition between two or more areas in which separate activities can take place. The hinged separation bulkhead can also be integrated within a movable floor.

The structure consists of a sturdy 316L stainless steel frame finished with polypropylene or polyester mounted to the frame. The separation wall also offers the possibility to have a different temperature on either side.

For exact details on this concept please feel free to contact us.

Variopool hinged bulkheads are suitable for professional competitive use and are fully compliant with local Health and Safety requirements. Each section is custom made to perfectly fit and operate inside the pool in order to create the safest possible swimming environment for all user groups.

### TECHNICAL SPECIFICATIONS

|                          |   |
